RETROSPECT

Concept behind an award winning architectural competition for Yeshwantrao Chavan Smriti Bhavan by Prof. R.G. Sawant.

A reminiscence of late Sh. Yeshwantrao Chavan his steadfast stature, his lifelong contributions his morals, his thoughts his ideologies and idiosyncrasies, the very awareness of his absences is to be recapitulated in more stone and brick - that's what the building wants to be !

The discovery of interplay between "what the building wants to be" and the specific circumstances of the programme site and the client is the achievement of the goal, it's the integration of our past and future through our reminiscence.

And this integration is the way of life, we can learn from nature. How a space is serviced with light, air and quiet must be embodied in the space order concept, which provides for the harbouring of these services. The nature of the space is further characterised by the minor spaces that serve it. Storage rooms, service rooms and cubicals are the servant spaces. The space order concept must extend beyond the harbouring of the mechanical services and include the servant space adjoining the spaces served. This will give meaningful form to the hierarchy of spaces.

Long ago they built in solid stones, today we must build in hollow stones - a forceful environment with its own physical order to inspire as late Sh. Yeshwantrao Chavan always did!

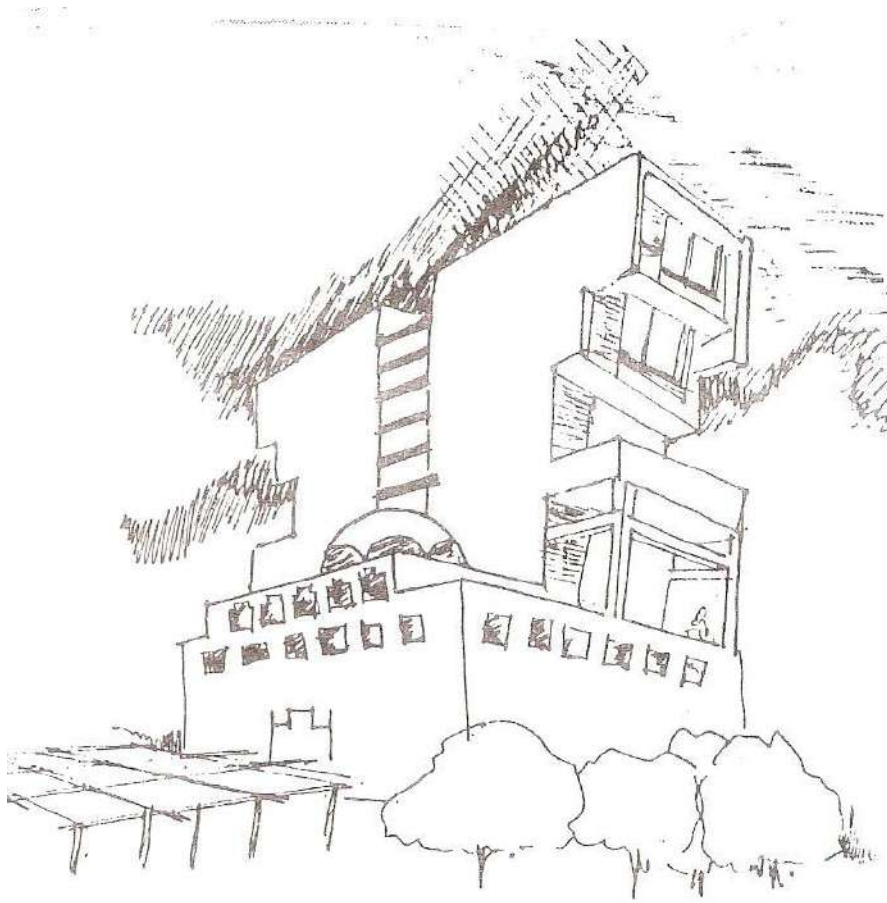

Well ! for the achievement of the same, to begin with, this proposal follows the rudimentary law of diffusing public circulation, the daily user circulation and the private circulation by restricting the formal to the initial levels of the structure. This leaves us with the foyer leading directly into the main public movement zones, namely, the museum, the art gallery and the multi purpose auditorium. Next in the hierarchy lie the pratishthan offices, the research and training centre plus the national library which are followed by the spaces to house the remaining proposed activities. A demonstration of a solution to the problem of what to do with the usual encroachment of mechanical services and the means of vertical transportation to served spaces is depicted. The servant spaces have been divided four ways, towards four separate corners which apart from providing an easy physical flow in and out, distinguish themselves visually as well as psychologically, too.

As far as detailed planning criteria are concerned, a special thought has been given to the location of the statue of late Sh. Yeshwantrao Chavan, within the complex. To feel him and to find him amongst us which is an even increasing desire, I propose to locate the statue not on a high pedestal located in the midst of fancy and artificial surroundings-instead in a distinguished environment created within the entrance foyer at a height though sufficiently raising him above the heads of all of us and yet keeping him among us. The awareness of his presence thus highlighted is sure to have most desired results. Thats important.

The library which distinguishes itself as the place of research, discovery and inspiration for man is located on the third floor under a geodesic dome creating a space just the way it needs to be for such a special function. Needless to mention the octagonal platform forming the base represents the eight directions in which the library is destined to spread knowledge and awakening.

The serenity of this dome - shell is interrupted only by the counter points of the terrace top courts accompanying it, providing the freedom to the visitor to choose a surrounding of his own choice.

The overall simplicity and spontaneity are the two assets with the for most priority which are incorporated all through the development of the design. Whether one enters by car at the basement level or y foot from the lawn and the porticos, the formal and the symmetrical organisation gives way to unexpected variety and surprises. The same also reflected in the elevational treatment given to the structure, recapitulating a tribute to a great soul!

FABRICATING A SETTLEMENT BASED ON AN AGRICULTURAL INDUSTRY - By Prof. R.G. Savant

For ages together it has been mankind's most supreme endeavour to make his living necessarily comfortable throughout his lifetime, either by adapting himself to the environs or suiting his surroundings to his needs and lifestyle. Years may have gone, days might have changed but his rudimentary demands are still there, a bit garnished now, but very much waiting, to be met. History has for cover shown us what the needs of a community are and it has also taught us what the dire consequences are, when, these are not met with in its proper course of action. But, what remains noteworthy is the fact that man has not learned much from all this. A lot remains overlooked, uncared for unattended.

Of late, we have had to see drastic imbalances and upsets in the ecology on the face of this earth, much of it owing to the ignorance or shall we call it, the callous behavior and attitude, man harbors in his perspective approach towards progress and growth. It is time he acted recognised and respected nature. For, it is undoubtedly nature that rules, nature that governs.

"Prakriti" as it is better known, is possibly the best teacher, that has been gifted to us mortals and, we have to use it for our betterment going hand in glove with it, not seek to wipe out its magnificence insanely.

Success is reactive. What one individual refers to as success may very much seem as a decline or degradation to another individual in the light of the character he values the most. Hence success, at growth and progress as I see it, has not been a total failure, but, may be somewhere, someday, somebody has erred in his approach and it has not been rectified for this long, long enough. We may even term this as incomplete success-success that is incomplete, as one devoid of nature, without "Prakriti".

It is only imperative having this responsibility of setting things right we got to make a beginning now, immediately.

When I say "We" I envelope not only architects, town planners, developers, geologists, environmental engineers, technical craftsmen or labourers but every single mind which is conscious about the deterioration of the

present living standards environments and the concrete jungles, that are nothing but our own creations, our own brainchild's.

So, come along and lend us a hand in the building of a landmark a landmark of architectural splendour and bliss. We have a lot to do and then let the world know that utopia isn't far, not very far from our reach. Not now. Not anymore.

In the existing challenge of fabricating a settlement based on an agricultural industry. It has been my constant effort to keep pace with the above described thoughts that pulsed through me, and, an honest attempt has been made to present the same, as a solution on paper, for your kind perusal.

In one of the solutions, we try to discard the existing "Tailormade" like forms of structures for a sugar factory adhere its character with the one of the setting, could be anywhere but most talked of in remote rural Maharashtra.

Bearing in mind the aspects of pollution elevation character and the architectural values, in a hierarchy that is justified, a type of fortified, terraced town has been thought upon. This tiered arrangement is set up on a hillock or a mountain block existing on the site.

The lowermost tier on one side has its administrative units for the industry to come, with its drum like rise, reaches out to the skies, from the next, higher tier. On the other side we have the residential units, dwelling block, and areas, recreational zones educational units, all in an ascending order, to form the quiet zone; devoid of pollution noise, air and water which is otherwise persistent in an alarming ratio. Constructional costs may be reduced to an eyebrow raising amount, in case, the raw material may be used from the excavation sites during the process of terracing. It is quite true that we may have depleting water table at these heights; but constructive thoughts like re-usage of water in a recycling plant, can be thought of, in a long term plan. These, however are to give you only a broader view of the concept and when developed upon, may unearth many more positive factors leading to its materialization.

In the other solution; we have a flat site or a very gentle slope, suggesting a form of a mound that is, to say, a rise gently from both sides; to form a summit. We may have storage and goods disposal units on both sides of the

ascent at the base, suggesting a stacked appearance and at the summit, we have the sugar industry. The sugar industry has its administrative block to one of its central axis which wholly looks into the need of its smaller units that may develop in the course of time like a paper industry or an another industry or fertiliser plant.

On the other side of this central axis we have another administrative block; looking after the needs of the institutions that are to follow like the medical college or the pharmacy college or engineering college all developed as an incentive and faculty for the manpower of the industry. The circulatory pattern seems to take a circumambulatory path around the industry. The sugar industry at the core now seems to be in control of the community which seems to revolve around it.

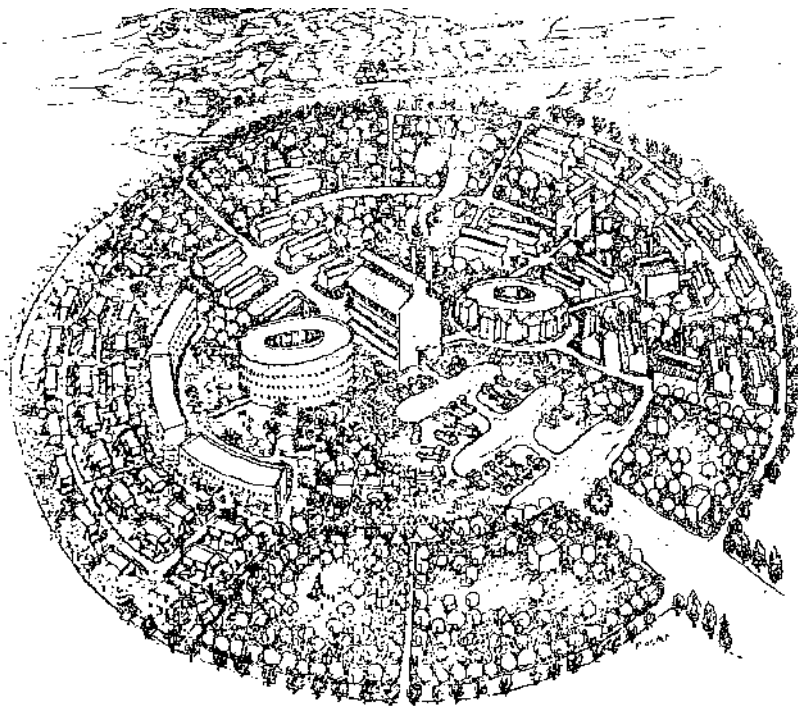

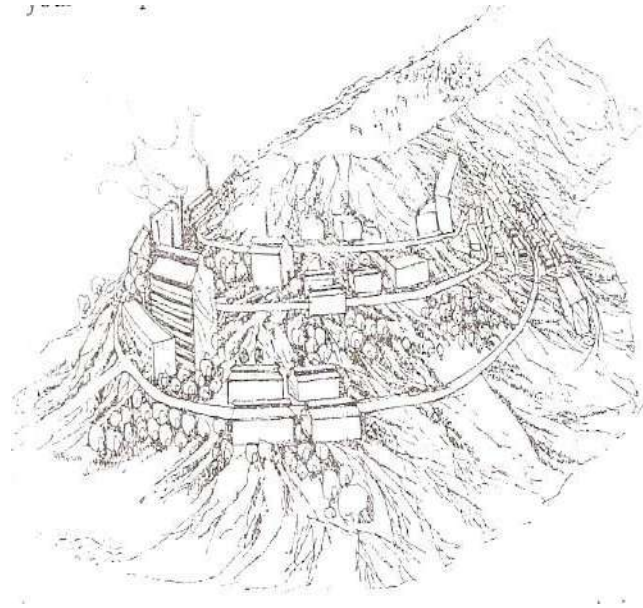

Such a structure may even call for water resource plants, and air pollution control devices, through trees and natural barriers can be used to a certain extent, to check the same; these calamities on a larger scale may call for the induction of such devices. Afterall, one has to have the basic five essentialities namely man, society, nature, ahare and network, so these sort of devices can be included under network which generally consists of the infrastructural facilities.

The designing has been a result of a study on the demands of the working class or manpower in general their behavioural pattern and their background or origin and an attempt has been made to restore them in the atmosphere they were in, till they made it here.

I have been conscious to their problems in the exiting structure and only after a vigorous study of sugar industry on a government estate and the parasitic developments they have taken place in and around it. I have concluded that the heart of industrial, educational, residential settlements can be trated to the sugar factory and this settlement shall translendingly be the most supreme manifestation of its kind proving the same.

"We live in a society where decisions are made by people looking on at the smallest context, i.e. the individual's site they are perfectly logical in what they do but the result is myopic".

"Quality of architecture and planning is the result of understanding constraints, not of ignoring or avoiding them".

AN OUTLOOK ON EXCELLENCE IN ARCHITECTURAL EDUCATION - PROF. R.G. SAWANT

"Students who were my greatest teachers" says - 'KEVIN LYNCH', the author of many architectural books. Candidate with right aptitude would contribute to excellence in architectural education. This doesn't mean that excellence in architectural education deposits only on the quality of the students but along with it following aspects play an important role in brief :

- 1 The equipment of the teacher.
 - 2 The programme of studies
 - 3 The facilities provided.
 - 4 The sympathy of the environment.
- The equipment of the teacher.

Along with academic skills and technical excellence the teacher shall be the resource person for the student.

The programme of studies :

The minimum standards of architectural education have been given by INDIAN INSTITUTE OF ARCHITECTS and COUNCIL OF ARCHITECTURE. The interpretation should be done considering day to day changes in socio-economic needs of society and architectural aptitude.

The Facilities Provided :

The eagerness to allow artificial intelligence in the architectural design process is a disturbing trend. "COMPUTERS' As long as we treat computers as good servant and not allow them to be bad masters architectural education will not suffer. References, study practicals for the students and research, documentation. Extension and consultation for the staff have also impact on standard of architectural education.

The Sympathy of the Environment :

Making the students aware of the challenging tasks of environmental issues - climate, elements of climate, factors governing the climate. The idea of climatically responsive design by modulating the conditions such that they are always or as close as possible to comfort zone. Study of dominant issues related to human comfort and also keeping in mind other Architectural concerns as well.

An attempt in brief for the good of architectural education.

"DONATED SPACE" A RESPECT GIVEN TO OUR CREATIONS.

Prof. R.G. Sawant

When we say we built space, our conscious and subconscious mind is taking care of physical and emotional qualities of the space.

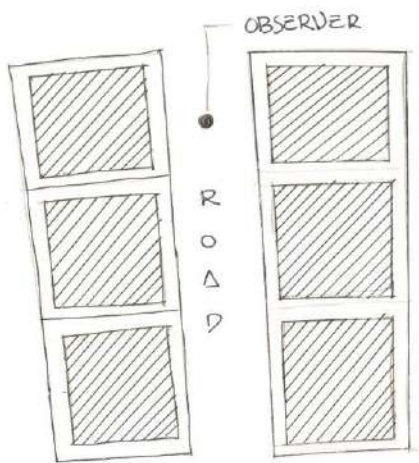

Here space is not the built form which respond to the environment but ever unbuilt form responding as an environment, by which our senses judge the physical and emotional qualities of unbuilt environment too.

Not only conscious effort of an architect should deal with the physical and emotional improvement of the built environment but also unbuilt environment.

Unbuilt environment is nothing but simply the harsh, unsustainable, unhealthy space left after creating the built form, just according or allotting the space so as to satisfy the basic needs of the occupants as a shelter. This large space left is due to the socio-economic strain on the creator.

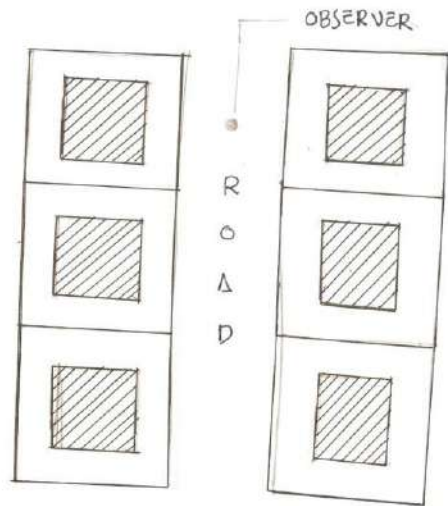

But here I would like to make a clear statement that though the socio-economic strains are the result of unhealthy, unsustainable space very few designers make an attempt to overcome this unhealthy, unsustainable, emotional qualities of out-door environment.

A corner plot (site) in a busy island. In the first fig. (a) the respect to the creation is lost whereas the fig (b) shows the proper manner where donated space gives respect to the built form as well as to the street island.

ATTITUDE OF A TEACHER :

It is always a privilege for a teacher to be part of parent's effort of educating their children. We should consider it our duty to guide our students to build their career. It should be our constant endeavor to not only meet their expectations but also give them above it. Many young talents are burnt out due to lack of encouragement. Therefore the mark and effort of the students should be identified and encouraged. It is not proper to neglect the talent which gives vent to their feelings. We should always consider that it also induces mental happiness and develops personality of an individual. Architecture is an art and science of designing a building. It has the power to take human beings through the journey of imaginary world. Our field is the medium to develop creativeness in the students. This change will be brought by generating interest and participating in various co-curricular activities.

We should always try to do our best to improve the qualities and values of our students. It is like walking that extra mile to see our students smile.

"Development of physical and emotional qualities of island sculpturer, island statues."

A reminiscence of late personality, his steadfast stature, his lifelong contributions his morals, his thoughts, his ideologies and idiosyncrasies the very awareness of his absence is to be recapitulated in more stone and bricks that what the sculpture of statue wants to be. Such public places prove national identity and a pride for every citizen. Such public places act / work / behaves ornaments of the place and make people love the country. Thus the character of such public places should be of prime importance.

The statue of Tararani at the entrance of Kolhapur. Statue Chhatrapati Shivaji Maharaj in front of Shivaji Chowk in the heart of city Kolhapur. Statue of Shri Shahu Maharaja at Dasara Chowk are some examples of public places of prime importance. Along with the geniuses of a sculpture the physical quality of space support the emotion of the sculpture in his creation. As I feel serious thought should be given by architects as a collaborative responsibilities in co-ordination with agencies included directly or indirectly as in order to clear cut dialogue with the society for which the wholesome of the event is included Architects are created in schools therefore it is serious need to incorporate such exercises which will finally develop sensitivity towards designing the physical qualities of such events and to support the emotional feeling of genius sculpture.

Sub: Inspection of Institutions imparting Architectural Education in India (Degree Courses) under Architects Act, 1972 for the academic session 2003-2004.

Dear Sir/Madam,

Council of Architecture, under the provisions of the Architects Act, 1972 and the Regulations framed thereunder, with the prior approval of the Central Government, is required to seek information from all authorities granting recognised qualification and inspect every institution imparting Architectural Education in India to oversee the maintenance of the Minimum Standards laid down by the Council of Architecture (COA) and to make its recommendation to the State/Central Government as provided under the Section 18,19 and 20 of the Architects Act, 1972.

Under Section 25 of the Architects Act, 1972 only a person who possesses a recognised architectural qualification specified under the said Act, after having undergone the courses of study, as stipulated in the Minimum Standards of Architectural Education Regulations, 1983, can register himself with the Council. Further registration with Council is essential for practice of Architecture, Employment with Government, higher education and teaching assignments.

The School of Architecture, B V Bhoomaraddi College of Engineering & Technology, Hubli - 580 031, Tel : 0836-2372076, Fax: 0836-2374985, E-mail: principal@bvbcet.net, is to be inspected in the first quarter of 2004, as per the decision of the Executive Committee which has been communicated to the School along with the Report of the previous Expert Committee for the School's observations and compliance vide this office letter no. CA/5/2002 dated 12.08.2002 (copy enclosed).

On behalf of Council of Architecture, I am pleased to appoint you as a member of the Expert Committee, for inspecting the above said School for monitoring the compliance of the norms of Council of Architecture. Shri Deepak Kambuj has been appointed the Convenor of the Expert Committee who shall co-ordinate the inspection. I request you to accept the appointment as an expert, and confirm the same.

It shall be appreciated if the inspection is conducted prior to 15th February, 2004 and your report is forwarded to Council of Architecture by 28th February, 2004, so as to facilitate the processing of the Expert Committee recommendations well ahead of the commencement of next academic session. The date of inspection may be mutually fixed in consultation with the School.

A copy of the Inspection Manual and Part-II of the Manual to be used by the Expert Committee for submitting the report and copy of honorarium form are also enclosed.

The School has been advised to fill up the Part-I of the Inspection Manual and send it to Council of Architecture (one hard copy & one on CD) and also forward the same (a hard copy) to the members of the Expert Committee by 15th January, 2004.

Conscious of the time and effort put in by the experts, the Council offers you an honorarium of Rs.500/- per day, subject to a maximum of Rs.1,000/-. The expenditure in connection with TA (air-fare by economy class) and DA will be borne by COA. The School has been requested to make arrangement for your stay and local hospitality during your visit.

Yours faithfully,

Dist. Sindhudurg.

Dear Sirs,

You have been already instructed to construct the above referred godown with iron angle trusses and tubular columns encased in the R.C.C. resting on column footing. Necessary drawings in this regard have already been forwarded to you. The details of the structure to be provided are listed below:-

1) Tubular columns with 4 pipes as given in the drawing shall be provided resting on the R.C.C. footing. Hence 45 cm long, 20 mm diameter bolts shall be provided in the footing as per the spacing given in the drawing. The above referred tubular columns shall be erected on the footing vertically without any deviation, so that further work can be taken in hand. However before encasing the above referred columns, the verticality of the individual columns be verified in detail. You are hereby advised to provide atleast 5 Kg. weighing plumb from the top so that the verticality of the columns can be verified at any moment.

ii) The angle iron trusses shall be erected on top of the above columns when the work has reached upto the roof tie level. In order to lay the tubular columns on the footings, following two alternatives are available:-

✓ a) Provide tubular columns on the RCC footings cast, based on soil strata met in individual pits. ✓

Alternatively

b) The bottom of the RCC footings shall be brought to one level by laying layers of 9" thick rubble soling and 6" thick 1:5:10 P.C.C. In this case the bottoms of the RCC footings shall be brought into one line and level in all the footings if feasible. Otherwise one section of the column either horizontally or laterally shall be brought into one line and level so that not more columns of two different lengths need to be fabricated and erected.
